

## ABSTRACT OF THE DISCLOSURE

5        A therapeutic sling seat comprising a flexible material which is non-uniform in  
stiffness providing maximum contact surface area with the body of a person seated  
in the seat by spreading the forces away from high pressure areas using multiaxis  
tension forces. The seat material in tension adapts to the contour of the posterior of  
the seated person. By controlling the pressures on the ischial tuberosities, physical  
10      problems such as ulcers can be avoided.
